

ANWIRE visions of architectures for adaptable services in the wireless Internet

I. Demeure

¹ Ecole Nationale Supérieure des Télécommunications, CNRS UMR 5141 – LTCl, France, isabelle.demeure@enst.fr

ANWIRE's objectives

- Provide:
 - a framework for integration, promotion and dissemination of design solutions and recent results in the two interrelated thematic areas: Wireless Internet and Reconfigurability.
 - co-ordination, enhancement, and synthesis of the individual partners' research activities, knowledge, and results
 - a reference point for promoting the European efforts in Wireless Internet & Reconfigurability and enhance awareness in these areas
- Task Force 4: "Architectures for Adaptable Services"
 - Considers personalized, context-aware and adaptable services over next generation network infrastructures.
 - **Common view on architectures for adaptable services**
 - Identification of requirements and main functional building blocks
